DATE MAILED: 06/02/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)	
	09/855,255	EDWARDS ET AL.	
	Examiner	Art Unit	
	TUAN A. PHAM	2618	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1) Responsive to communication(s) filed on 03 April 2006.
 2a) This action is FINAL. 2b) This action is non-final.
 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4) Claim(s) 1-46 is/are pending in the application.
 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
 5) Claim(s) 13-25,27,28,31-42 and 46 is/are allowed.
 6) Claim(s) 1-12, 26, and 29-30 is/are rejected.
 7) Claim(s) _____ is/are objected to.
 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9) The specification is objected to by the Examiner.
 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) <input type="checkbox"/> Notice of References Cited (PTO-892)	4) <input type="checkbox"/> Interview Summary (PTO-413)
2) <input type="checkbox"/> Notice of Draftsperson's Patent Drawing Review (PTO-948)	Paper No(s)/Mail Date. _____
3) <input type="checkbox"/> Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08) Paper No(s)/Mail Date _____	5) <input type="checkbox"/> Notice of Informal Patent Application (PTO-152)
	6) <input type="checkbox"/> Other: _____

DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed on 04/03/2006 have been fully considered but they are not persuasive.

In response to applicant's remark on page 2, Applicant argues that the Hemkumar (U.S. Patent No.: 6,434,110) does not teach "determining an amplification gain based on a near-end signal" in claim 1.

In response to applicant's arguments as stated above, the Examiner respectfully disagrees with the Applicant's argument. Hemkuma teaches a full-duplex speakerphone system including far-end and near-end speaks. The full-duplex speakerphone system of Hemkuma comprises a programmable gain amplifier (figure 1, gain amplifier 156) for adjusting the gain based on the input signal from the microphone at near-end (see figure 1, gain amplifier 156, MIC input at API, col.4, ln.31-49, col.6, ln.10-21). Therefore, the teaching of Hemkuma reference still read on the claimed limitations.

Base on the above rational, it is believed that the claimed limitations are met by the combination of Hemkuma and Cornelisse and therefore, the rejection are still maintained.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-12, 26, 29, and 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hemkumar (U.S. Patent No.: 6,434,110) in view of Cornelisse (Pub. No.: US 2002/0076072).

Regarding claim 1, Hemkumar teaches a method of processing a far-end signal and a near-end signal to produce a final signal, the far-end signal containing speech, the near-end signal containing speech and background noise, the method comprising (see figure 1):

determining an amplification gain based upon the near-end signal (see figure 1, gain amplifier 156, MIC input at API, col.4, ln.31-49, col.6, ln.10-21),

removing a portion of the background noise from the near-end signal to create a noise-reduced near-end signal (see figures 1-3, HPF 158 for reducing the background noise, col.6, ln.22-30),

combining the far-end signal with the noise-reduced near-end signal to create a combined signal (see figure 1, summing 130, far-end NI, col.5, ln.48-67), and

amplifying the combined signal by the amplification gain to create the final signal (see figure 1, RX AGC 138, col.11, ln.25-45).

It should be noticed that Hemkumar fails to teach the amplification gain by using a fitting formula for correction of hearing loss. However, Cornelisse teaches such features (see figure 7A, [0054-0056]):

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teaching of Cornelisse into view of Hemkumar in order to adjust the loudness by user as suggested Cornelisse at column 1, [0009].

Regarding claim 2, Cornelisse further teaches the method wherein the act of determining the amplification gain includes determining the masking level (i.e., the sound pressure level) of the near-end signal (see col.2, [0027]).

Regarding claim 3, Cornelisse further teaches the method wherein the act of determining the amplification gain includes determining the sound pressure level (energy signal) of the near-end signal (see col.2, [0027], col.6, [0060]).

Regarding claim 4, Cornelisse further teaches the method wherein the act of determining the amplification gain includes determining the sound pressure level above the threshold of hearing audibility (see col.2, [0030]).

Regarding claim 10, Hemkumar further teaches the method wherein the act of removing a portion of the background noise from the near-end signal includes filtering the near-end signal with a high-pass filter (see figure 1, HPF 158, col.6, ln.22-30).

Regarding claim 11, Hemkumar further teaches the method wherein the act of removing a portion of the background noise from the near-end signal includes filtering the near-end signal with a high-pass filter and suppression of the DC component of the near-end signal (see figure 1, HPF 158, echo suppressor, col.4, ln.1-15, col.6, ln.22-30).

Regarding claim 12, Hemkumar further teaches the method wherein the act of removing a portion of the background noise from the near-end signal includes removing a portion of the background noise via the spectral subtraction technique (see col.6, ln.22-35).

Regarding claims 26 and 29, Hemkumar further teaches a program storage device containing computer readable instructions that when executed by a digital signal processor perform the method of claim 1 (see figure 1, col.4, ln.1-15).

Regarding claim 30, Hemkumar further teaches the telephone wherein the telephone is a cellular telephone (see col.4, ln.1-15).

4. Claims 5-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hemkumar (U.S. Patent No.: 6,434,110) in view of Cornelisse (Pub. No.: US 2002/0076072) as applied to claim 1 above, and further in view of Shennib (U.S. Patent No.: 5,197,332).

Regarding claim 5, Hemkumar and Cornelisse, in combination, fails to teach the NAL-NL1 protocol. However, Shennib teaches such features (see col.3, ln.55-60).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teaching of Shennib into view of Hemkumar and Cormelisse in order to apply the use of different type of protocol to meet the characteristic of particular frequency band.

Regarding claim 6-9, Shennib further teaches the NAL-NL1 protocol. Shennib does not teach the Fig 6 protocol, the Cambridge protocol, the Independent Hearing Aid Fitting Forum protocol, and the Desired Sensation Level input/output protocol. However, choosing different type protocol as claimed would not involve any inventive feature since it is just a matter of selecting the type of protocol for a purpose of changing the operation of the amplification gain.

Allowable Subject Matter

5. Claims 13-25, 27-28, 31-42, and 46 allowed.

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tuan A. Pham whose telephone number is (571) 272-8097. The examiner can normally be reached on Monday through Friday, 8:30 AM-5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew Anderson can be reached on (571) 272-4177. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR.

Application/Control Number: 09/855,255
Art Unit: 2618
